

Stochastic differential equation

Simon Frost (@sdwfrost), 2020-04-27

Introduction

A stochastic differential equation version of the SIR model is:

- Stochastic
- Continuous in time
- Continuous in state

Libraries

```
using DifferentialEquations
using SimpleDiffEq
using Distributions
using Random
using DataFrames
using StatsPlots
using BenchmarkTools
```

Transitions

```
function sir_sde!(du,u,p,t)
    (S,I,R) = u
    ( $\beta$ ,c, $\gamma$ , $\delta t$ ) = p
    N = S+I+R
    ifrac =  $\beta$ *c*I/N*S* $\delta t$ 
    rfrac =  $\gamma$ *I* $\delta t$ 
    ifrac_noise = sqrt(ifrac)*rand(Normal(0,1))
    rfrac_noise = sqrt(rfrac)*rand(Normal(0,1))
    @inbounds begin
        du[1] = S-(ifrac+ifrac_noise)
        du[2] = I+(ifrac+ifrac_noise) - (rfrac + rfrac_noise)
        du[3] = R+(rfrac+rfrac_noise)
    end
    for i in 1:3
        if du[i] < 0 du[i]=0 end
    end
    nothing
end;
```

sir_sde! (generic function with 1 method)

Time domain

Note that even though we're using fixed time steps, DifferentialEquations.jl complains if I pass integer timespans, so I set the timespan to be Float64.

```

 $\delta t$  = 0.1
nsteps = 400
tmax = nsteps* $\delta t$ 
tspan = (0.0,nsteps)
t = 0.0: $\delta t$ :tmax;

0.0:0.1:40.0

```

Initial conditions

```

u0 = [990.0,10.0,0.0]; #  $S, I, R$ 

3-element Array{Float64,1}:
 990.0
  10.0
   0.0

```

Parameter values

```

p = [0.05,10.0,0.25, $\delta t$ ]; #  $\beta, c, \gamma, \delta t$ 

4-element Array{Float64,1}:
 0.05
 10.0
 0.25
 0.1

```

Random number seed

```

Random.seed!(1234);

MersenneTwister(UInt32[0x000004d2], Random.DSFMT.DSFMT_state(Int32[-1393240

```

Post-processing

We can convert the output to a dataframe for convenience.

```

df_sde = DataFrame(sol_sde')
df_sde[:, :t] = t;

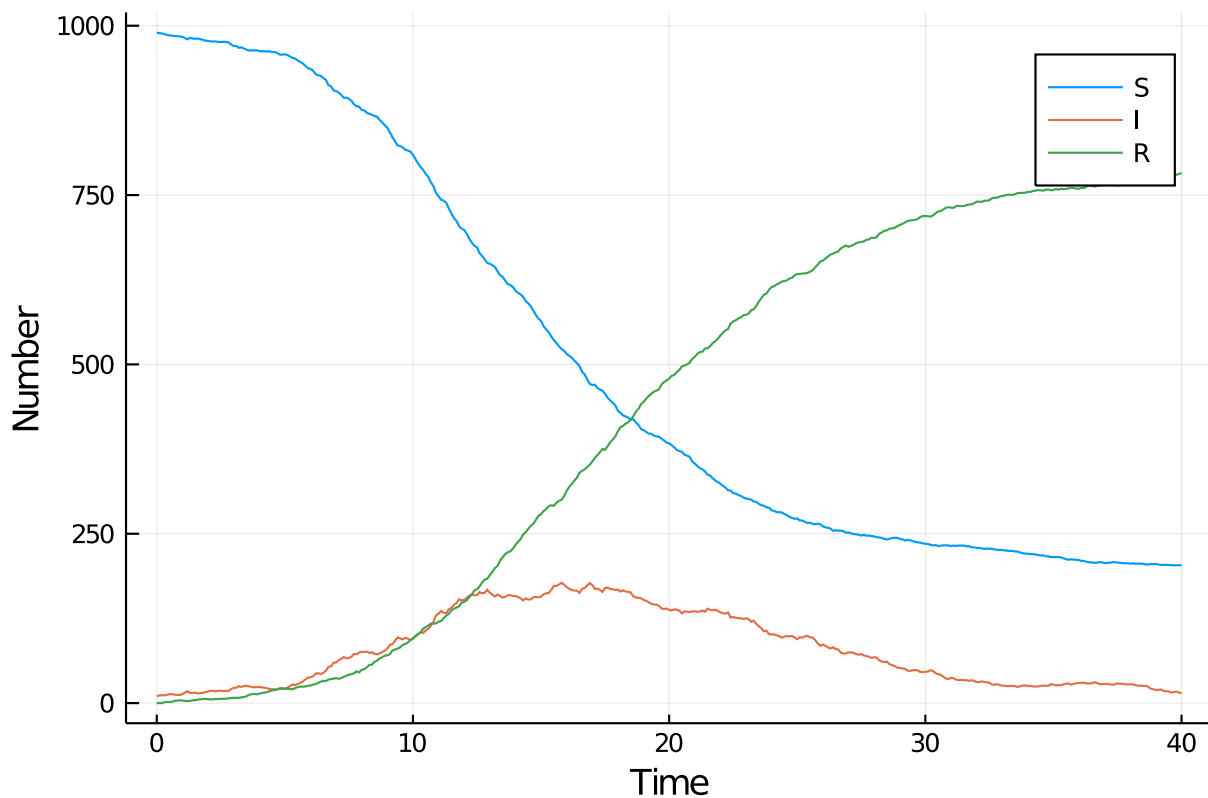

```

```
0.0:0.1:40.0
```

Plotting

We can now plot the results.

```
@df df_sde plot(:t,  
  [:x1 :x2 :x3],  
  label=["S" "I" "R"],  
  xlabel="Time",  
  ylabel="Number")
```

Benchmarking

```
@benchmark solve(prob_sde,solver=FunctionMap)
```

BenchmarkTools.Trial:

memory estimate: 58.73 KiB

allocs estimate: 472

minimum time: 64.787 μ s (0.00% GC)

median time: 74.811 μ s (0.00% GC)

mean time: 87.128 μ s (8.39% GC)

maximum time: 25.212 ms (96.86% GC)

samples: 10000

evals/sample: 1
